MAGNETOLITH®

EMTT® – New Possibilities in Regenerative and Restorative Medicine

As one of the most innovative technologies to treat chronic musculoskeletal diseases, Extracorporeal Magnetotransduction Treatment (EMTT®) is non-invasive, evidence-based, and an exceptional complement to EPAT/ESWT. Application areas of EMTT include diseases of the musculoskeletal system such as pain in the lower back, arthrosis as well as inflammation in tendons and joints. EMTT can be distinguished from other general forms of magnetic field technology or PEMF due to its high oscillation frequency of 100 – 300 kHz. This feature enables deeper penetration and a wider range of applications. The clinical benefits of EMTT have been demonstrated in several clinical studies.^{1,2,3,4}

EMTT Indications

Musculoskeletal disorders:

- Degenerative joint disorders
Wear and tear conditions such as osteoarthritis (knees, hips, hands, shoulders, elbows), herniated discs, spondylarthrosis
- Pain treatment
(Chronic) pain, for example, back pain, lumbago, tension, radiculopathy
- Sports injuries
(Chronic) inflammation of tendons and joints, tendon overuse syndromes, inflammation of the pubic bone

Benefits:

- Evidence-based
- Non-invasive
- Wide range of applications
- Outpatient procedure
- No need to remove clothing
- No side effects
- Easy to use
- High level of patient comfort
- Excellent complement to EPAT®/ESWT®

Facts and Figures:

EMTT® Highlights

- High oscillating frequency with high penetration depth
- Continuous and reliable operation by water-cooled applicator
- Simple plug in and plug out to change applicator
- Integrated touch display to adjust energy level, frequency and pulse rate
- Flexible holding arm and one locking knob for easy positioning
- Effectivity and safety proven in studies

MAGNETOLITH Parameters:

Oscillation frequency	➔ 130 kHz
Oscillations per pulse	>15
Maximum field strength (at the coil)	0.6T
Magnetic field strength (4cm distance from the coil)	60 mT
Performance of the magnetic field (dBmax/dt)	➔ 65.300 T/s
